Department of Clinical Services | Pune, Maharashtra

Cardiology Outpatient Consultation

Department of Cardiology | 29 April 2026

Patient Name	Mohammed Al-Farsi	Age / Gender	62 Years / Male
Date of Birth	17 July 1963	Cardiologist	Dr. Sunita Krishnan, DM (Cardiology)
MRN	30067890	Report Date	29 April 2026

DIAGNOSES / CONDITIONS

Diagnosis / Condition	Severity
Coronary Artery Disease (CAD) — LAD Territory	Significant — Urgent Angiography Required
Heart Failure with Mildly Reduced EF (HFmrEF)	Moderate — EF 48%
LV Diastolic Dysfunction	Mild — Grade I
Dyslipidaemia	Significant — Untreated

INVESTIGATION RESULTS

Test / Parameter	Result	Reference Range	Status
Ejection Fraction (Echo)	48%	55-70%	LOW
Stress Echo	Positive — Inducible ischaemia (LAD)	Negative	ABNORMAL
BNP (Heart Strain Marker)	210 pg/mL	<100 pg/mL	HIGH
Troponin I	0.02 ng/mL	<0.04 ng/mL	NORMAL
LDL Cholesterol	168 mg/dL	<100 mg/dL	HIGH
HDL Cholesterol	35 mg/dL	>40 mg/dL	LOW
Triglycerides	189 mg/dL	<150 mg/dL	HIGH
ST Depression on Stress ECG	1mm in V4-V6	No changes	ABNORMAL

PRESCRIBED MEDICATIONS

Medication	Dosage	Frequency	Purpose
Aspirin	75mg	Once daily	Prevents blood clots in arteries
Atorvastatin	40mg	Once daily	Lowers bad cholesterol and stabilises artery plaques
Bisoprolol	2.5mg	Once daily (titrate up)	Slows heart rate and reduces cardiac strain
Losartan	50mg	Once daily (continued)	Controls blood pressure; supports heart failure management

IDENTIFIED RISK FACTORS

Risk Factor	Explanation
Heart attack risk	Blocked LAD territory artery confirmed on stress test — urgent angiogram needed
Heart failure progression	Reduced pumping function (EF 48%) could worsen without treatment
Sudden cardiac event	Strenuous activity must be avoided until the blocked artery is treated

PATIENT-FRIENDLY SUMMARY

Patient-Friendly Summary

Mr. Mohammed Al-Farsi is a 62-year-old man with breathlessness during activity and chest heaviness. Tests show that one of his main heart arteries is likely significantly blocked, and his heart is pumping slightly below normal. This is not a heart attack right now, but it is serious and needs urgent attention. He has been started on blood thinners, a cholesterol-lowering drug, and a heart-protecting medicine, and has been scheduled for a coronary angiogram to locate the blockage and decide on treatment (stenting or bypass surgery). He must avoid heavy exercise until then.
